React Calculator Brief

This challenge is designed to test your react skills in making components, mapping data out, managing your state and receiving user input. It is important to note that this is a not a maths test and you will not need to create the maths logic for a calculator! We will be using a library to facilitate that.

Visually you can design this calculator however you like! Go crazy!! The image above might provide you with some inspiration as well 😀

Requirements:

A basic calculator with the following buttons:

- Plus, Minus, Times, Divide and Equals Buttons
- Clear Button
- 0-9 Number buttons

Instead of trying to make your own calculator logic see the Eval function provided by the Mathjs library: Mathjs Eval Function.
